

# Roche in Sub-Saharan Africa

## Our Mission

Roche in Africa aims to improve every step of a patient's journey by removing barriers to access quality healthcare—from diagnosis to treatment— because we believe patients in sub-Saharan Africa deserve the same treatment as everyone else.

We are building on our lasting commitment to business in Africa and 120 years of pioneering in healthcare to make a difference where we are needed most.

### Disease Awareness:

Roche supports local community partners to increase public health awareness and advance prevention, early detection and monitoring.

### Diagnosis:

Roche works with in-country officials to address lack of trained diagnostic workers and laboratory capacity.

### Healthcare Capacity:

Roche invests in clinics, labs, hospitals and education to improve the quality of health delivery.

### Financing:

Roche builds co-financing partnerships and new pricing models to ensure that all who need our medicines can access them at an affordable cost.

## Strengthening the healthcare system requires all stakeholders

**We work in partnership across the healthcare system.** Roche aims to develop partnerships to develop comprehensive and sustainable programs on behalf of patients.

To date, memorandums of understanding have been signed with four different countries. These agreements address a holistic approach to strengthening healthcare systems.
